SUMMARY

Software Engineer with 2 years of experience designing, deploying, and sustaining production-grade AI systems on cloud infrastructure across Azure, AWS, and GCP. Delivered 95% query resolution accuracy, 60% improved RAG relevance, and 40% latency reduction in live environments. Deep expertise in Python, REST APIs, CI/CD, and agentic AI frameworks including Claude Code, LangChain, and LangGraph. Proven in root-cause analysis, escalation resolution, and on-time feature delivery in Agile/Scrum teams.

EXPERIENCE

Software Engineer - Tata Consultancy Services

Aug 2024 – Present

- Architected and delivered an AI-powered natural language query assistant for the CMG analytics dashboard on Linux-based Azure using OpenAI GPT-4, Anthropic Claude APIs, and LangChain orchestration; achieved **95% query resolution accuracy** for 200+ business users.
- Applied agentic AI tooling including Claude Code and LangChain/LangGraph to accelerate feature development, refactoring, and debugging; reduced average debugging cycle time by **40%** while maintaining full engineering accountability throughout the SDLC.
- Engineered a production RAG pipeline using FAISS vector database, sentence-transformer embeddings, and SQL-backed metadata storage; boosted response relevance by **60%** and eliminated ~8 hrs/week of manual filtering effort.
- Owned sustaining engineering for mission-critical production services: monitored cloud environments, triaged escalations, and performed root-cause analysis on complex incidents, sustaining **100% SLA compliance**.
- Scaled deployments via Git and GitHub Actions CI/CD on Azure; integrated AI inference modules with REST APIs and optimised async processing, cutting dashboard response latency by **40%**.
- Led Agile/Scrum ceremonies including sprint planning and backlog grooming; structured 20+ epics into time-estimated user stories, driving **100% on-time release delivery** over 6 consecutive sprints.

Artificial Intelligence Intern - IEEE Bombay Section

Sept 2023 – Mar 2024

- Developed a Python-based FAQ chatbot using the GPT API with intent classification; automated content organisation via Python scripts, integrated API responses into web pages, and resolved end-to-end deployment issues independently.
- Gathered and analysed user feedback to iterate on chatbot accuracy; introduced workflow improvements that **reduced team onboarding time by 30%** and produced documentation adopted across the engineering team.

EDUCATION

MCT's Rajiv Gandhi Institute of Technology

Jan 2020 – May 2024

Bachelor of Engineering in Electronics & Telecommunication Engineering; CGPA: 8.34/10.0

Mumbai, India

PROJECTS

SmartInspect AI – Quality Report Automation / *Python, LangGraph, OpenAI, Streamlit, FAISS, SQL*

- Built an industrial quality reporting system using Streamlit, LangGraph, and LLM APIs; orchestrated a 5-stage agentic pipeline (ingestion, preprocessing, defect detection, root-cause analysis, PDF generation), cutting processing time by **35%** and issue-identification effort by **30%**.
- Applied prompt engineering and embedding-based retrieval with a FAISS/SQL metadata layer; integrated model explainability and ethical AI guardrails ensuring reliable, auditable outputs.

FoodHub – Full-Stack Food Ordering Platform / *React.js, Redux Toolkit, Jest, Tailwind CSS, REST APIs*

- Constructed a production food-delivery application with React.js and Redux Toolkit; integrated JWT authentication, a live restaurant discovery API, and Stripe payment gateway with secure REST API communication.
- Achieved **100% unit test coverage** with Jest and React Testing Library; optimised bundle performance via code splitting, lazy loading, and memoisation with a mobile-first Tailwind CSS responsive UI.

SKILLS

Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL, HTML5, CSS3

Agentic AI & LLMs: Claude Code, LangChain, LangGraph, OpenAI API, Anthropic Claude API, RAG Pipelines, Prompt Engineering, FAISS/Pinecone, Embeddings

Cloud & DevOps: Microsoft Azure, AWS, GCP, Linux, Git, GitHub Actions, CI/CD, REST APIs, Networking Fundamentals

ML / AI Frameworks: TensorFlow, scikit-learn, NLP, Computer Vision, Model Training & Evaluation

Core Competencies: Software Design, Debugging, Root-Cause Analysis, Agile/Scrum, Unit Testing, Performance Optimisation, API Integration, State Management
